

# S.P.A.Systems Ltd

## Trolley units - for non-touring applications.

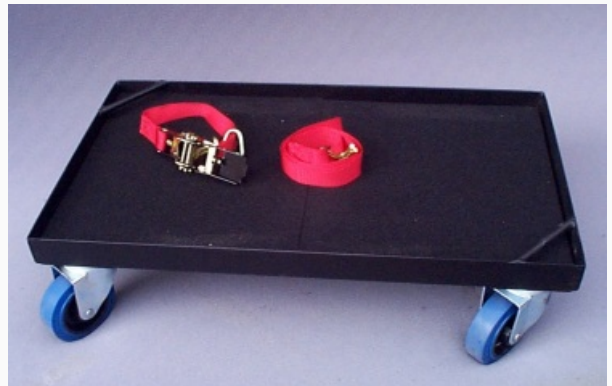

### Basic description.

Shermann's range of custom built trolley boards represents a simple but thoroughly effective answer to transport problems in larger venues such as broadcast centres, shopping malls, theatres and other entertainment venues.

Construction is simple but effective.

The trolley boards are extremely durable although tough may be a more appropriate description.

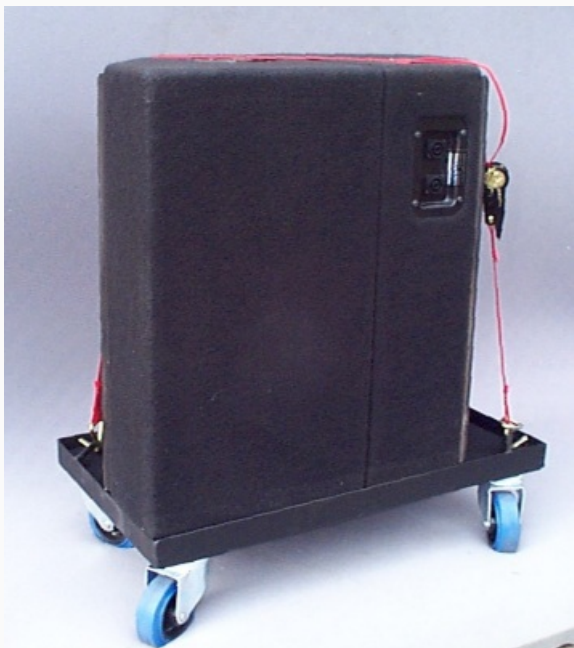

The frame is constructed from welded steel angle, fitted with a carpet covered baseboard of 12mm birch plywood and equipped with 100mm swivel castors .

### Ease of use.

All trolley boards are fitted with two tie points ready to attach the hooks of the 25mm ratchet straps supplied as standard with every unit.

Most trolley boards will store two cabinets which are secured with ratchet straps as in the example below where two Shermann LM-301 wedge monitors have been placed on the trolley and secured within seconds to facilitate storage or dispatch to another working area.

### Options.

Locking swivel castors may be specified in place of the standard swivel type.

Tough waterproof covers are also available to protect the loaded trolley assembly.

Trolley frames may be finished in a variety of colours to suit corporate requirements.

If you have any questions about our range of custom built trolley boards or require a quotation for a trolley unit to store any **Shermann** cabinets in singles or pairs please call us on 08456 44 22 09.

You may also send details of requirements to [sales@shermann.com](mailto:sales@shermann.com).

### Important.

***To avoid risk of injury to operatives or damage to the cabinets do not attempt to move any loaded trolley assembly without first securing the ratchet strap.***
